

CS2115: COMPUTER ORGANIZATION

Effective Term

Semester A 2024/25

Part I Course Overview

Course Title

Computer Organization

Subject Code

CS - Computer Science

Course Number

2115

Academic Unit

Computer Science (CS)

College/School

College of Computing (CC)

Course Duration

One Semester

Credit Units

3

Level

B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

Medium of Assessment

English

Prerequisites

Nil

Precursors

Nil

Equivalent Courses

Nil

Exclusive Courses

Nil

Part II Course Details

Abstract

This course aims to introduce digital logic, Boolean algebra and also principles behind the organization of the functional parts of CPU and fundamental components. The course demonstrates computer architecture and programming CISC and RISC microprocessors. It also introduces the basics of assembly language programming.

Course Intended Learning Outcomes (CILOs)

CILOs		Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Describe functions of the basic building blocks of a digital system.				
2	Identify various architectures and explain the design concepts of computer systems.			x	
3	Create the designs of simple digital logic circuits.		x		
4	Apply techniques of assembly language to write simple programs.		x		
5	Explain and critique the basic operations of cache and main memory, I/O operations and interrupt, as well as analyzing the performance of different designs.		x	x	

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

Learning and Teaching Activities (LTAs)

LTAs		Brief Description	CILO No.	Hours/week (if applicable)
1	Lecture	Students will explain key concepts, such as theories related to computer organization and architecture. Discuss practical questions and exercises with students.	1, 2, 3, 4	3 hours/week

2	Tutorial	Students will demonstrate the usage of useful supporting software tools and do exercise and case studies. The students will apply the computer organization concepts and use the supporting software tools to implement to design and analysis problems.	2, 3, 4, 5	8 hours/semester
3	Group project	Students will work as a group to apply computer organization concepts to design, implement and validate a CPU and its associated instruction set. The design will be done using circuit simulation software.	1, 2, 3, 4	After class
4	Assignment	Students will apply computer organization concepts to solve different programming, analysis and calculation problems that are common in modern operating system design.	1, 2, 3, 4, 5	After class

Assessment Tasks / Activities (ATs)

	ATs	CILO No.	Weighting (%)	Remarks (e.g. Parameter for GenAI use)
1	Coursework	1, 2, 3, 4, 5	20	4 assignments
2	Midterm Exam	1, 2, 3, 4, 5	10	

Continuous Assessment (%)

30

Examination (%)

70

Examination Duration (Hours)

2

Additional Information for ATs

For a student to pass the course, at least 30% of the maximum mark for the examination must be obtained.

Assessment Rubrics (AR)**Assessment Task**

Coursework

Criterion

Assignment may include short factual questions and design exercises regarding the various building blocks of computer. Assignment may include simple circuit design project / exercises. There would be hands-on and case study on circuit design

during tutorial. Assignment may include mini programming project in assembly language. There would also be hands-on exercises during tutorial.

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Assessment Task

Midterm Exam

Criterion

The mid-term quiz will include questions assessing the students' understanding on architectural aspect of computer such as single bus organization.

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Assessment Task

Final Exam

Criterion

The final exam and mid-term quiz will include questions assessing the students' understanding on architectural aspect of computer such as single bus organization, I/O, bus, interrupt and peripheral operations.

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-)

Moderate

Marginal (D)

Basic

Failure (F)

Not even reaching marginal levels

Part III Other Information

Keyword Syllabus

Number Systems. Floating Point. Logic Gates. Combinational Circuit Design. Classical Combinational Circuits. Basic Computer Architecture Model. Classification of Processors. Stages of Instruction Execution. Memory Systems. Memory Mapped I/O, Programmed I/O, Interrupt I/O, DMA. Assembly Programming. Addressing Mode. Stack Operation.

Syllabus

- Number systems
Number representation. Binary arithmetic. Conversion between number systems. Floating point numbers and calculations, IEEE floating point.
- Digital logic fundamentals
Logic gates and principles. Boolean Algebra. Basic combinational circuits. Karnaugh-Map logic simplification. Examples with applications.
- Basic computer organization
Functional subsystems: CPU, memory, input/output systems.
- CPU organization and operations
CPU model, Fetch and execute cycle. Control unit and signal, Interrupt cycle, case study on a typical microprocessor.
- Assembly instruction and assembly language programming
Machine code instruction. Assembly instruction. Assembly language programming. Addressing modes and example of assembly program.
- Processor design
Instruction pipelining. Classification of Processors. CISC v.s. RISC
- Memory system
Memory bus, memory access. Cache.
- I/O system, bus and interrupt and peripherals
Basic model of an I/O system including programmed, Interrupt, DMA.

Reading List**Compulsory Readings**

Title	
1	Carl Hamacher, Zvonko Vranesic, Safwat Zaky and Naraig Manjikian (2012). Computer Organization and Embedded Systems. McGraw-Hill Education, 6th edition.

Additional Readings

Title
