

# 巴西野牡丹 (Princess Flower)

## *Tibouchina semidecandra*

常綠灌木，原產地在巴西。巴西野牡丹由春季至秋季開花，於夏季至冬季會結出罈狀球形蒴果果實。花期時因花朵很多和花期長，因此常用在園林之中。外型跟香港野外常見的野牡丹十分相似，皆屬同科。

Princess Flower is an evergreen shrub native in Brazil. It blooms from spring to autumn and produces urn-shaped fruit from August to December. Due to its long flowering period and abundant flowers, it is commonly adopted in gardening. It looks like *Melastoma malabathricum* in Hong Kong which is classified into the same family.

名稱 Common Name	巴西野牡丹 Princess Flower
品種名稱 Botanical Name	<i>Tibouchina semidecandra</i>
