# MA2507: COMPUTING MATHEMATICS LABORATORY

**Effective Term** Semester A 2024/25

# Part I Course Overview

**Course Title** Computing Mathematics Laboratory

Subject Code MA - Mathematics Course Number 2507

Academic Unit Mathematics (MA)

**College/School** College of Science (SI)

**Course Duration** One Semester

Credit Units

Level B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction

English

**Medium of Assessment** English

# Prerequisites

Grade B or above in MA1201 Calculus & Basic Linear Algebra II and subject to approval from MA must be obtained; or Grade C- or above in MA1301 Enhanced Calculus & Linear Algebra II

Precursors

Nil

**Equivalent Courses** Nil

Exclusive Courses Nil

# Part II Course Details

# Abstract

This course aims to provide a computer laboratory type training for students on using analytical, numerical and statistical software tools. It develops students' ability to apply computing softwares as problem solving tools and to approach the solution of problems via computing mathematical techniques.

#### Course Intended Learning Outcomes (CILOs)

	CILOs	Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Students will learn how to manipulate mathematical and statistical software packages including MATLAB and MAPLE.			x	
2	Students will learn how to implement basic commands of MATLAB in algebraic and arithmetic computations.			x	
3	Students will learn how to design and interpret programs in MATLAB programming language.			х	
4	Students will learn how to approach more complicated problems in algebra and calculus with the aid of MAPLE.			x	
5	Students will learn how to construct and apply numerical methods algorithmically.				X
6	the combination of CILOs 1-5				

#### A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

#### A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

# A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

	LTAs	Brief Description	CILO No.	Hours/week (if applicable)
1	Lectures	Students will learn by lectures.	1, 2, 3, 4, 5, 6	14 hours in total
2	Laboratory sessions	Students will learn through laboratory sessions which is primarily based on interactive problem solving and question/ answer sessions allowing instant feedback.	1, 4	4 hours

#### Learning and Teaching Activities (LTAs)

3	Laboratory sessions	Students will learn through laboratory sessions which is primarily based on interactive problem solving and question/ answer sessions allowing instant feedback.	2, 3	6 hours
4	Laboratory sessions	Students will learn through laboratory sessions which is primarily based on interactive problem solving and question/ answer sessions allowing instant feedback.	5	2 hours
5	In-class exercise	Students will learn through in-class exercises which helps students practise computing and programming skills introduced in lectures.	1, 2, 3	6 hours in total
6	Take home assignmentsStudents will learn through take-home assignments which requires students to perform mathematical computations with software packages and to solve numerical problems by writing programs.		1, 2, 3, 4, 5	after-class
7	Project	Students will learn through project which helps students apply numerical and computational techniques to solve a more sophisticated mathematical problem and to analyze its solution. It also helps students to communicate and collaborate effectively in the team.	1, 2, 3, 4, 5	after-class

# Assessment Tasks / Activities (ATs)

	ATs	CILO No.	Weighting (%)	Remarks (e.g. Parameter for GenAI use)
1	In-class exercises	1, 2, 3	10	These exercises provide hand-on computer practice to familiarize students with computing and programming techniques.

2	Quizzes/Test/Midterm	1, 2, 3, 4, 5	50	Questions are designed to enable students to demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.
3	Hand-in assignments	1, 2, 3, 4, 5	30	These are skills based assessment to see how well the students have learned basic concepts of MATLAB programming and applied MAPLE as problem solving tools.
4	Project	1, 2, 3, 4, 5	10	Students are assessed on their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

# Continuous Assessment (%)

100

# Examination (%)

0

# Additional Information for ATs

100% coursework

# Assessment Rubrics (AR)

#### Assessment Task

1. In-class exercises

# Criterion

Ability to manipulate computing and programming techniques via hands-on computer practice.

# Excellent (A+, A, A-)

Can always manipulate computing and programming techniques via hands-on computer practice.

# Good (B+, B, B-)

Can usually manipulate computing and programming techniques via hands-on computer practice.

# Fair (C+, C, C-)

Can sometimes manipulate computing and programming techniques via hands-on computer practice.

# Marginal (D)

Can rarely manipulate computing and programming techniques via hands-on computer practice.

# Failure (F)

Cannot manipulate computing nor programming techniques via hands-on computer practice.

#### Assessment Task

2. Quizzes/Test/Midterm

#### Criterion

Ability to demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.

#### Excellent (A+, A, A-)

Can always demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.

#### Good (B+, B, B-)

Can usually demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.

# Fair (C+, C, C-)

Can sometimes demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.

#### Marginal (D)

Can rarely demonstrate manipulating skills of using software packages to perform calculations, to write commands and to analyze programs of numerical methods.

#### Failure (F)

Cannot demonstrate manipulating skills of using software packages to perform calculations, nor to write commands nor analyze programs of numerical methods.

#### Assessment Task

3. Hand-in assignments

#### Criterion

Capacity to use basic concepts of MATLAB programming and applied MAPLE as problem solving tools

Excellent (A+, A, A-)

High

# Good (B+, B, B-)

Significant

Fair (C+, C, C-) Moderate

Marginal (D) Basic

Failure (F) Not even reaching marginal levels

#### Assessment Task

4. Project

#### Criterion

Ability to show their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

#### Excellent (A+, A, A-)

Can always show their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

#### Good (B+, B, B-)

Can usually show their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

# Fair (C+, C, C-)

Can sometimes show their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

#### Marginal (D)

Can rarely show their ability in applying numerical and computational methods to solve mathematical problems, as well as on the presentation of numerical results with analysis.

#### Failure (F)

Cannot show their ability in applying numerical nor computational methods to solve mathematical problems, nor on the presentation of numerical results with analysis.

# Part III Other Information

#### **Keyword Syllabus**

MATLAB and Numerical Computation. Python and Applications.

#### **Reading List**

#### **Compulsory Readings**

	Title
1	Text(s): Stephen J. Chapman, "Essentials of MATLAB® programming", Thomson Nelson, 2006.
2	D. Beazley & B. K. Jones, "Python Cookbook", O'Reilly, 2013
