MNE3125: FLUID MECHANICS FOR ENERGY-RELATED APPLICATIONS

Effective Term Semester B 2024/25

Part I Course Overview

Course Title Fluid Mechanics for Energy-Related Applications

Subject Code MNE - Mechanical Engineering Course Number 3125

Academic Unit Mechanical Engineering (MNE)

College/School College of Engineering (EG)

Course Duration One Semester

Credit Units 3

Level B1, B2, B3, B4 - Bachelor's Degree

Medium of Instruction English

Medium of Assessment English

Prerequisites Nil

Precursors Nil

Equivalent Courses Nil

Exclusive Courses Nil

Additional Information

#Prerequisites which are not part of the Major Requirement are waived for students admitted with Advanced Standing.

Part II Course Details

Abstract

Although droplets are tiny and ordinary, their power and impact can be large and far-reaching. One recent breakthrough technology is that we can use a new generation of droplet-based electricity generator to produce electrical power, and it has been demonstrated that one drop of rain can light up 100 LED bulbs.

This course introduces new concepts of fluid mechanics and droplets. The objectives of this application-focused course include: (a) to develop the fundamental principles of fluid mechanics and to explore the new implications of these principles; (b) to develop the problem-solving skills essential to good engineering practice of fluid mechanics in real-world applications. This course also aims to provide the students with the opportunity to intergrade the knowledge they acquired in classroom and apply it in real work setting; develop hands-on skills through industry-supported projects; and develop an understanding of the real-world operation of industry, based on which students can further plan his/her career.

Course Intended Learning Outcomes (CILOs)

	CILOs	Weighting (if app.)	DEC-A1	DEC-A2	DEC-A3
1	Describe the basic principles and theories and single-phase (bubbles, droplets) and multiphase (slurries) systems.			Х	
2	Identify fluid-related real world engineering problems.		х		
3	Conduct visualization experiments in laboratory sessions to analyse fluid-related mechanical engineering problems with theories.		x		
4	Build laboratory-scale prototypes to model the real world engineering systems.		х		

A1: Attitude

Develop an attitude of discovery/innovation/creativity, as demonstrated by students possessing a strong sense of curiosity, asking questions actively, challenging assumptions or engaging in inquiry together with teachers.

A2: Ability

Develop the ability/skill needed to discover/innovate/create, as demonstrated by students possessing critical thinking skills to assess ideas, acquiring research skills, synthesizing knowledge across disciplines or applying academic knowledge to real-life problems.

A3: Accomplishments

Demonstrate accomplishment of discovery/innovation/creativity through producing /constructing creative works/new artefacts, effective solutions to real-life problems or new processes.

	LTAs	Brief Description	CILO No.	Hours/week (if applicable)
1	Lecture	Introduce striking fluid mechanics phenomena using various visualization techniques. Provide room to clarify doubts that would enhance the understanding of the subject.	1, 2, 3	3 hrs for 13 weeks

Learning and Teaching Activities (LTAs)

2	Laboratory Work	Investigate concepts through hand-on	1, 2, 3, 4	3 hrs for 4 weeks
		experiments; acquire		
		skills in handling of apparatus and in		
		engineering report write up; promote active		
		participation.		

Assessment Tasks / Activities (ATs)

	ATs	CILO No.		Remarks (e.g. Parameter for GenAI use)
1	Tests and Assignments	1, 2, 3	20	One mid-term test
2	Laboratory Reports	1, 2, 3, 4	20	2 reports to be submitted

Continuous Assessment (%)

40

Examination (%)

60

Examination Duration (Hours)

3

Additional Information for ATs

For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.

Assessment Rubrics (AR)

Assessment Task

Tests and Assignments

Criterion

1.1 Capacity for understanding the key concepts, principles and theories of some new fluid mechanics phenomena. 1.2 Ability to analyse and solve related engineering problems.

Excellent (A+, A, A-)

High

Good (B+, B, B-)

Significant

Fair (C+, C, C-) Moderate

Marginal (D)

Basic

Failure (F) Not even reaching marginal levels

Laboratory Reports

Criterion

2.1 Capacity for self-learning to understand the principles of fluid mechanics through performing experiments by following instructions given.

2.2 Ability to analyse and present the results of experiments in the proper technical report format.

Excellent (A+, A, A-)

High

Good (B+, B, B-) Significant

Fair (C+, C, C-)

Moderate

Marginal (D) Basic

Failure (F) Not even reaching marginal levels

Assessment Task

Examination

Criterion

3.1 Ability to explain the basic principles and fundamental concepts of new fluid mechanics phenomena.3.2 Capacity for analysing and solving given problems using relevant and appropriate formulae.

Excellent (A+, A, A-)

High

Good (B+, B, B-) Significant

Fair (C+, C, C-) Moderate

Marginal (D)

Basic

Failure (F) Not even reaching marginal levels

Additional Information for AR

Note: For a student to pass the course, at least 30% of the maximum mark for both coursework and examination should be obtained.

Part III Other Information

Keyword Syllabus

- · Flow visualization
- · Viscosity, rheology, surface tension
- · Water-droplet dispensers
- · Reynolds number, laminar flow, turbulent flow
- · Liquid spreading, bouncing, jumping, coalescence
- · Nature-inspired fluid flow
- · Condensation, boiling, Leidenfrost
- · Fog and dew harvesting
- · Photothermal
- · Water-energy nexus
- · Water kinetic energy harvesting
- · Programmed droplet transport
- · Particle flow instability
- · Water-to-electricity
- · Triboelectric nanogenerator (TENG)
- · Large scale prototyping
